## Cynomolgus IL-17A/CTLA-8 Protein

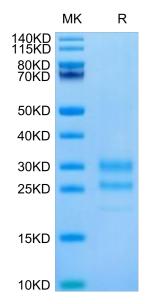

Cat. No. ILA-CM417

| Description             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Source                  | Recombinant Cynomolgus IL-17A/CTLA-8 Protein is expressed from HEK293 with His tag and Avi tag at the C-Terminus.                                                                                                                                                                                                                                                                                                                                                                                                    |
|                         | It contains Gly24-Ala155.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Accession               | XP_005552816.1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Molecular<br>Weight     | The protein has a predicted MW of 18.2 kDa. Due to glycosylation, the protein migrates to 26-32 kDa based on Bis-Tris PAGE result.                                                                                                                                                                                                                                                                                                                                                                                   |
| Endotoxin               | Less than 1EU per μg by the LAL method.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Purity                  | > 95% as determined by Bis-Tris PAGE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                         | > 90% as determined by HPLC                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Formulation and Storage |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Formulation             | Lyophilized from 0.22µm filtered solution in PBS (pH 7.4). Normally 8% trehalose is added as protectant before lyophilization.                                                                                                                                                                                                                                                                                                                                                                                       |
| Reconstitution          | Centrifuge the tube before opening. Reconstituting to a concentration more than 100 µg/ml is recommended. Dissolve the lyophilized protein in distilled water.                                                                                                                                                                                                                                                                                                                                                       |
| Storage                 | -20 to -80°C for 24 months as supplied from date of receipt80°C for 3 months after reconstitution.Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.                                                                                                                                                                                                                                                                                                  |
| Background              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|                         | Interleukin17A (IL17A), also known as CTLA8, is a 1520 kDa glycosylated cytokine that plays an important role in antimicrobial and chronic inflammation. The six IL17 cytokines (IL17AF) are encoded by separate genes but adopt a conserved cystine knot fold.IL-17A is a ligand for IL17RA and IL17RC. The heterodimer formed by IL17A and IL17F is a ligand for the heterodimeric complex formed by IL17RA and IL17RC. Involved in inducing stromal cells to produce proinflammatory and hematopoietic cytokines. |

### **Assay Data**

### **Bis-Tris PAGE**

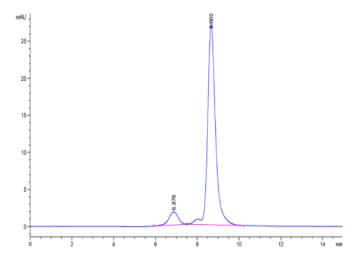

Cynomolgus IL-17A on Bis-Tris PAGE under reduced condition. The purity is greater than 95%.

SEC-HPLC

# KAGTUS

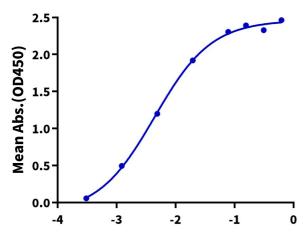

### **Assay Data**

The purity of Cynomolgus IL-17A is greater than 90% as determined by SEC-HPLC.

#### **ELISA Data**

## Cynomolgus IL-17A, His Tag ELISA 0.2µg Cynomolgus IL-17A, His Tag Per Well

 $Log\ Anti-IL-17A\ Antibody,\ hFc\ Tag\ Conc.(\mu g/ml)$ 

Immobilized Cynomolgus IL-17A, His Tag at  $2\mu g/ml$  (100 $\mu l/well$ ) on the plate. Dose response curve for Anti-IL-17A Antibody, hFc Tag with the EC50 of 4.4ng/ml determined by ELISA.
